PROFESSIONAL SUMMARY

Infrastructure engineer specializing in cloud platforms, large-scale automation, and resilient distributed systems across AWS and Azure. Expertise in Terraform, Kubernetes, Python automation, CI/CD orchestration, observability, governance engineering, and secure enterprise-scale data movement.

Built and automated infrastructure powering healthcare and enterprise platforms, including provisioning 700+ production-grade servers, securing 150M+ file transfer pipelines, and engineering reusable deployment systems for multi-region cloud environments.

SKILLS

Cloud & Platform Engineering: AWS, Azure, Kubernetes (AKS/EKS), ECS, EC2, Azure Storage, IAM, VPC, Networking, Distributed Systems, Platform Reliability, Multi-Region Infrastructure

Infrastructure as Code & Automation: Terraform, CloudFormation, AWS CDK, Ansible, Infrastructure as Code (IaC), Infrastructure Automation, Configuration Management, Immutable Infrastructure, Environment Standardization

Programming & Systems Automation: Python, Go, PowerShell, Bash, SQL, Automation Frameworks, Event-Driven Automation, REST APIs, Backend Engineering

DevOps & Delivery Engineering: GitHub Actions, Jenkins, Azure DevOps, Docker, CI/CD Architecture, Deployment Orchestration, OIDC Authentication, Release Automation

Observability, Governance & Security: CloudWatch, Azure Monitor, Log Analytics, Governance Automation, RBAC, IAM, Policy Enforcement, Monitoring & Alerting, Operational Excellence

WORK EXPERIENCE

Software Infrastructure Engineer Infinite Computer Solutions (Client: Molina Healthcare) Missouri, USA
Sep 2024 – Present

- Provisioned and orchestrated 700+ production-grade servers using Terraform and Ansible for a large-scale healthcare platform modernization across multi-region environments
- Architected reusable Infrastructure-as-Code frameworks and deployment orchestration pipelines that standardized provisioning workflows across compute, storage, networking, and application layers
- Built highly scalable automation systems using Python and PowerShell for governance enforcement, infrastructure validation, tagging compliance, and post-provision operational verification across 1,000+ enterprise cloud resources
- Designed secure data movement architecture for 150M+ files using Azure Storage, AzCopy, Defender for Storage malware scanning, Blob Index Tags, and Log Analytics validation workflows
- Eliminated major deployment bottlenecks by redesigning Terraform workflows, resolving state drift inconsistencies, and improving deployment reliability across multiple production environments
- Optimized multi-stage Ansible orchestration pipelines for complex distributed infrastructure rollouts, significantly improving deployment consistency and reducing operational recovery overhead
- Led infrastructure incident response, RCA, and observability improvements across AWS and Azure using CloudWatch, Azure Monitor, and centralized logging pipelines

Cloud Infrastructure Engineer GenPx Inc (Client: Sunrun) Irving, Texas, Dec 2022 – Sept 2024

- Designed and maintained secure cloud landing-zone architectures for enterprise-scale file migration workflows integrating Azure Storage, Defender for Storage, Log Analytics, and controlled internal data movement systems
- Built modular Terraform and CloudFormation frameworks provisioning VPCs, IAM roles, networking layers, compute resources, and storage infrastructure across AWS and Azure environments
- Developed enterprise-grade GitHub Actions and Jenkins CI/CD pipelines automating infrastructure deployment, validation, rollback handling, and environment consistency verification
- Implemented centralized observability systems using CloudWatch, Azure Monitor, and Log Analytics with

custom dashboards, telemetry pipelines, and proactive alerting strategies

- Developed Python automation frameworks for infrastructure health checks, governance validation, reporting automation, and operational compliance analysis
- Supported AKS and EKS cluster operations including troubleshooting pod failures, networking inconsistencies, observability gaps, and deployment instability within distributed containerized environments

Software Engineer Cognizant Technology Solutions

Hyderabad, India, Dec 2021 – Aug 2022

- Developed event-driven automation workflows using AWS Lambda, S3, and CloudWatch for scalable backend processing and monitoring operations
- Built backend services and microservices using Go and Spring Boot, improving API response performance and optimizing distributed service efficiency by 25%
- Developed Python-based log analysis and monitoring tools that automated CloudWatch log parsing, anomaly detection, and infrastructure diagnostics
- Managed and troubleshot AKS-based containerized workloads, resolving networking issues, container crashes, pod instability, and deployment configuration failures
- Automated infrastructure provisioning using CloudFormation templates, improving consistency, repeatability, and operational reliability for AWS deployments

PROJECTS

Automated File Transfer & Validation Framework (Azure)

- Built automated enterprise file transfer workflows using AzCopy, Blob Index Tags, Defender for Storage, and validation pipelines to ensure secure and compliant large-scale data movement

Access Control Automation Platform (AWS)

- Developed Terraform-based IAM automation with OIDC integration for scalable multi-account access management and policy enforcement

EDUCATION

Master of Science in Computer Science Stevens Institute of Technology — Hoboken, NJ

- GPA: 3.78/4 | Provost Master's Scholarship Recipient

Bachelor of Technology in Electronics and Communication Engineering Jain University — Bengaluru, India

- GPA: 7.8/10 | Minor in Computer Science

LEADERSHIP & DISTINCTIONS

- Ranked in the Top 0.1% nationally in the National Mathematics Olympiad (India)
- Runner-Up — JU Hackathon
- Vice President — JT Tech Club, leading technical events, engineering initiatives, and student hackathons
- Level 6 Certified in Abacus with multiple regional and national competition participations
